

iOS Code Challenge

Write an iOS app using the Rick & Morty REST API
(<https://rickandmortyapi.com/documentation>).

Use your imagination to visualize characters, locations, and/or episodes. There are no requirements except to impress with architectural decisions and general usability of the app.

There is a limit of 10,000 requests per IP address per day so use your requests wisely. You can use a README to add your notes on decisions and project setup. Please share your finished code through GitHub within 3 days of receiving this email.

Good luck!
